CE Power Solutions Announces E.ON Service Agreement

Another step toward continued growth in the Electrical Service Market

(Cincinnati, OH) Custom Engineered (CE) Power Solutions, LLC, is again celebrating another milestone in its path to becoming the premier electrical services provider to the Electrical Generation, Transmission and Distribution Industry. CE Power Solutions was awarded a 5 year Service Agreement Contract by E.ON/LG&E in mid-December 2006, set to commence February, 2007. This multi-million dollar contract will grant CE Power responsibility for service and maintenance of E.ON substations in and around Louisville (LG&E) and Lexington (KU). With this award, CE Power has now launched a Louisville-based operation appropriately called CE Power Solutions Kentucky, LLC, which will serve as an associated company to headquarters, CE Power Solutions, LLC (based in Cincinnati).

Combined with active contracts at Alabama Power and FPL-E, the award of this contract is another example of the excellent action plan designed to serve the needs of clients such as E.ON, while also maintaining budget-savvy solutions.

CE Power Solutions is a privately held company based in Cincinnati, Ohio. The company provides electrical and mechanical product sales and services for the utility, industrial, institutional and O.E.M marketplace. It is best known for its ability to solve electrical distribution challenges, such as switchgear, transformer, control, generator and high voltage for their clients. For more information about CE Power and its products and services, contact Mark McCloy at 513-563-6150. Information can also be obtained via the Internet at www.cepowersol.com.
