

Solution Profile

Staffing Support

Committed to providing cost-effective solutions that make you more effective!

<u>Client Type</u>	Utility—Substations
<u>Challenge/Issue</u>	Provide scheduled maintenance for all substations and construction projects and work orders with lowest possible Full Time Equivalent Headcount (FTE), while maintaining clean recordable incident performance, and implement apprenticeship program for next generation
<u>Equipment Involved</u>	Distribution and transmission substation facilities and equipment to include transformers, circuit breakers, switches, bus, cable, rleyas, controls, insulators, CT's, PT's, grounding structures, control room facilities and all components and structures associated with utility substation
<u>Solution</u>	Increase work order completion count, while reducing FTE average, meet goal of zero recordable accident
<u>Scope/Deliverables</u>	Provide experienced and trained personnel with vehicles and equipment to fill electric utility skill sets required for project management, construction, design review, site supervision, testing, maintenance, operations and inspections of electric utility distribution and transmission substations. Develop and maintain an apprenticeship and training program to backfill experienced personnel being lost to retirement and downsizing.
<u>Timeframe:</u>	3 year contract with (2) one-year renewable options.
